

⇒ **Exhibition****Crafted and designed illumination**

The designs created by Lindsay Stefans and Milko Cudina Begovic are based on the interaction of light and space. The two founders of the design studio Invisible Light in New York, USA share the philosophy that light is an "integrated element of the environment". Lindsay, who has worked internationally as a lighting designer on large-scale projects such as Frank Gehry's "Disney Concert Hall", gained her many years' experience in the field through architectural and performance lighting. Milko Cudina Begovic has a long professional career as a designer in Argentina. Both use materials such as wood, paper and string to create light objects for application in architectural spaces, but also design lighting concepts for everything from a millionaire's swimming pool to high end retail projects.
